LEGAL BASIS FOR THE TRANSFORMATION OF PUBLIC PROPERTY AND THE RUSSIAN LEGISLATION ON PRIVATIZATION IN THE 1990s

KEYWORDS: Transformation of Public Property, Privatization, Russian Legislation on Privatization

SUMMARY

The article discusses the history of the legislation on privatization in Russia and features of use of privatization as a regulator of the modern economic policy in the Russian Federation.

The author shows the unique experience of privatization in Russia in the 1990s, which allowed on short notice creating the private sector in the Russian economy.

Privatization as a paradigm of modern economic policies of developed countries becomes now a truly universal. Having replaced the strategy of state intervention in the economy that had prevailed since the World War First and had even intensified after the global economic crisis of the 1929-1933, the policy of privatization rapidly covered the majority of foreign countries in the early 1970s. If until the 1970s there were no concept of privatization in the legal, economic and political lexicon, it could not be found in the dictionaries and reference books of that time, now privatization, like taxes, becomes one of the most important aspects of election programs of political parties, the whole branches of law are being

---

1 This work uses results derived from the outputs of the Project No. 14-03-00603, implemented within the “Russian Foundation for Humanities” Program (2014-2015).
formed around it and etc. Privatization has even reached Cuba and other “orthodox” countries with planned economy.

Privatization boom fell on the first half of 1990s. Many countries were actively using the experience of the UK, the “pioneer” of privatization, in their privatization programs. Each country has formed its own set of privatization tools and techniques, taking into account the specifics of the prevailing economic, social and political realities, and coming from the needs of reforming the national structure of ownership.

In the countries of Southern Europe (Italy, Spain, Portugal and Greece) the privatization policies were influenced much by the urgent need to cover the budget deficit rather than by neoliberalism. Different situation was in the north of Europe. In Sweden, Finland, Norway and Denmark, the privatization boom was driven not by fiscal considerations, but primarily by the interests of economic policy: in countries with traditionally high share of public sector in the economy, privatization was conditioned by the need for structural economic reforms, which were hoped to improve the competitiveness of national industries in global markets and to support rapid transition to high-tech industries.

In countries with developed federalism (for example, in Canada) privatization was carried out mainly at the regional level. Some countries used privatization to fit promptly into the globalization processes of economic relations. Specifically privatization itself was considered in some countries as tool for formation of transnational market environment.

Developing countries of the Third World (in Africa, Latin America, Asian-Pacific region), basing their economic policies on the strong public sector, under the influence of the world financial institutions (especially, the World Bank) have adopted the proposed privatization programs and have taken significant cuts in the national public sector.

In Russia, as in most post-Soviet countries, privatization has become one of the key elements in the system of market reforms and decentralization of the

---

economy. "Privatization in Russia was unprecedented not only in scale, but also in content”, says the policy brief of the Accounts of Chamber of the Russian Federation. “In contrast to countries with developed market economies, where the transfer of the state-owned property into private ownership helped increase the effectiveness of individual enterprises, privatization in Russia was intended to provide a radical shift in property relations, that is, to meet the challenge of changing the economic basis of society”3.

However, implementation of privatization programs in the post-socialist space differed in their effect. While in some countries (China, Baltic countries) privatization caused relatively low socio-economic losses, in Russia, Ukraine and the Central Asian states the privatization campaigns were accompanied by enormous economic and social upheaval.

ABOUT THE CONCEPT OF PRIVATIZATION

In scientific discourse, the term “privatization” is used in different meanings. Privatization in the broad sense is defined as “the process occurring in the national economic system for reducing the public sector, as well as structural redistribution of property rights in favor of private capital by reducing the share of the state in the gross national product”4.

The official documents of the US Government contain reference on privatization as a long term strategy to expand the private sector by reducing the public sector.

Privatization, understood in this way, is an element of the state policy of economy deregulation, the implementation of which leads to an increase in the contribution of the private sector in the economic development of society.

---

Privatization at the macro level involves the transformation of a significant number of economic agents that ultimately leads to considerable changes in the ownership structure of the means of production, reduction in government consumption of goods and services, and strengthening the role of private institutions in the socio-economic development.

In the narrow sense of the word, privatization is “the process of limiting the powers of state as a subject of ownership, management and / or administration, which is initiated by the state and institutionalized by the relevant legislative acts” 5.

In this meaning, privatization can be understood in different ways. For example, in the UK, privatization means the reduction of state participation in the capital of the company to less than 50%, and in Turkey, privatization is recognized fulfilled even if the state reserves the greater part of the property in its ownership6.

In the model law on privatization offered by the World Bank, privatization refers to the transactions resulting in the sale of the state-owned enterprises, the substantial part of the state property to the private entities, or the transfer of control over the state enterprises or a substantial part of other state property to individuals (Article 2)7.

The legislation of the Russian Federation contains several definitions of privatization. So, according to Article 1 of the Federal Law of December 21, 2001 No. 178-FZ “On Privatization of the State-owned and Municipal Property”, privatization is understood as the paid acquisition of property owned by the Russian Federation, subjects of the Russian Federation, municipalities in the property of physical and (or) legal entities for compensation (Article 1).

A similar definition of privatization can be found in the Civil Code of the Russian Federation of November 30, 1994 No. 51-FZ: “Privatization is the process

---

of transfer of the property in the state or in the municipal ownership into the ownership of the citizens and of the legal entities in the order, stipulated by the laws on privatization of the state and municipal property» (Article 217).

Doctrinal definitions of privatization in some cases may differ from the legislated ones. Some Russian and foreign scientists, defining privatization, mean not only the process of transferring the public property, but also the implementation of measures to reduce the impact of the public sector and, accordingly, to strengthen the position of the private sector in the economy and to promote business activity in the country8.

This concept of privatization allows, for example, distinguishing between privatization of property (proprietary privatization), the object of which is the ownership right, and privatization of functions (functional privatization), when certain functions of the state and competencies of public authorities are transferred to institutions of private law (various associations, unions, self-regulatory organizations, and so on) within the framework of liberalization of public administration and state regulation9.

When defining privatization, the historical features of the public property formation and augmentation in some post-socialist states should be also taken into account.

Currently, such concepts as gratuitous transfer of the state-owned and the municipal property are emerged in their legislation, establishing the legal framework for public property. Obviously, this legal model of the public property alienation is not privatization in the above sense, and it resembles the “return” of the state-owned property in cases, when the restitution tools are not used.

Examples of such specific cases of the public property transfer in the Russian Federation are presented in the legislation on privatization of the state-

---

owned and municipal housing fund\textsuperscript{10}, as well as in the Special Procedure for the transfer of religious buildings and constructions with related land and other state-owned or municipal property of religious purposes into the ownership of religious organizations for use in their respective order\textsuperscript{11}.

**DEVELOPMENT OF LEGISLATION ON PRIVATIZATION IN RUSSIA: ECONOMIC REFORMS AND IMPROVEMENT OF PUBLIC FINANCES**

The objectives of privatization in the Russian Federation differed significantly from those of privatization campaigns in the West.

Privatization in Russia becomes one of the ways of the economy denationalization and transition to a market economy. Without solving this initial task, the Russian Government would not be able to move on to the “classic” purposes of privatization (economic reforms, improvement of public finances, and so on).

The origins of the modern legal model of privatization in Russia should be sought in the second half of the 1980s. At this historical stage of privatization, which is called “creeping” \textsuperscript{12} (“free” \textsuperscript{13}, “bureaucratic” \textsuperscript{14}) privatization, the economic relations on privatization began to develop de-facto, however, they were not regulated legislatively.

\textsuperscript{10} The legislative regulation of privatization of the housing fund in the state and the municipal ownership is characterized by, firstly, being carried out in accordance with the “own” law on privatization, Law of the Russian Federation of July 1991 No. 1541-1 “On Privatization of the Housing Fund in the Russian Federation”, and, secondly, being closely connected with the Russian housing legislation.

\textsuperscript{11} In accordance with the Federal Law of June 25, 2002 No. 73-FZ “On the Objects of Cultural Heritage (monuments of history and culture) of the Peoples of the Russian Federation”, the objects of cultural heritage of religious purpose may be transferred to the religious organizations property only, in compliance with the order established by the legislation of the Russian Federation (Paragraph 2, Article 50). The relevant procedure is provided for in the Federal Law of September 26, 1997 No. 125-FZ “On Freedom of Conscience and on Religious Associations”, which stipulates the principle of a gratuitous transfer of religious buildings and constructions with related land and other property of religious purpose owned by the state and municipalities into the ownership of religious organizations (Paragraph 3, Article 21). It is also regulated by the Federal Law of November 30, 2010 No. 327-FZ “About Transfer of the State-owned or Municipal Property of Religious Purposes to the Religious Organizations”, which establishes procedures of a gratuitous transfer of this type of public property into ownership.

\textsuperscript{12}Privatization in Russia/ Edited by A.B. Chubays. M., 1999.

\textsuperscript{13} Alekseev S.S. Property Right. Issues of Theory. 3\textsuperscript{rd} edition. M., 2010.

The legislative framework of privatization began to emerge in the early 1990s. The Law of the RSFSR of July 3, 1991 No. 1531-1 “On Privatization of State-owned and Municipal Enterprises in the RSFSR” provided the first legal definition of privatization: “Privatization of the state-owned and municipal enterprises is a purchase by citizens, joint stock companies (partnerships) from the government and local Councils of People’s Deputies of enterprises, workshops, factories, departments, other independent divisions of these companies; equipment, buildings, constructions, licenses, patents and other tangible and intangible assets of liquidated companies and their divisions; shares (stocks) of the state and local Councils of People’s Deputies in the capital of joint stock companies (partnerships); shares (stocks) of privatized companies in the capital of other joint stock companies (partnerships), associations, concerns, unions and other consolidated companies” (Article 1).

In pursuance of the legislation on privatization and aiming to accelerate privatization processes the Supreme Council of the Russian Federation adopted Resolution “On differentiation of the state-owned property in the Russian Federation between the federal property, public property of the republics in the structure of the Russian Federation, territories, regions, autonomous region, autonomous districts, Moscow city and Saint-Petersburg city, and the municipal property” (December 27, 1991 No. 3020-1).

The legislation on the “first wave” privatization has been actually launched in 1992, when Russia began the “voucher” privatization (1992-1994).

Mass privatization has started in Russia in accordance with the Decree of the President of the Russian Federation of July 1, 1992 No. 721 “On organizational
measures for transformation of the state-owned enterprises, voluntary associations of state-owned enterprises into joint stock companies”.

The first stage of privatization was featured by using vouchers as means of payment (hence, this stage was called “voucher” privatization). In compliance with Paragraph 1 of the Decree of the President of the Russian Federation of August 14, 1992 No. 914 “About Enacting the System of Privatization Vouchers in the Russian Federation” (hereinafter Decree No. 914), the system of privatization vouchers was introduced in the country starting from October 1, 1992 “in order to accelerate the transfer of public property to citizens of Russia and to involve public at large into privatization processes”.

According to Decree No. 914 the every citizen of the Russian Federation was granted the right to receive one privatization voucher of equal nominal value per issue. Vouchers issues were released on the basis of decrees of the President of the Russian Federation. Paragraph 3 of the Decree contained the rule prohibiting “the issuance of securities or the creation of other systems for unpaid transfer of the state-owned and municipal property into the ownership of citizens of the Russian Federation and their associations in republics, territories, regions, the autonomous region, cities of Moscow and St.-Petersburg, districts and cities”.

Decree No. 914 approved the Regulations on Privatization Check, according to which, privatization checks become the tools of “the mechanism of unpaid transfer to citizens of the Russian Federation of enterprises, their divisions, stocks and shares in joint stock companies and partnerships”, being in the federal ownership and in the ownership of the subjects of the Russian Federation in the course of privatization.

Privatization check was recognized the special-purpose non-reusable government securities: once used to purchase of privatizing property it was then cancelled and redeemed from circulation.

Each privatization voucher had the certain validity, determined at its release by the Government of the Russian Federation and indicated on the voucher. The validity should not be less than one year and should not exceed two years. Upon
validity expiration the privatization checks were considered cancelled and were redeemed from circulation.

According to the Regulations on the Sale of Shares in the Course of Privatization and the Regulations on Private Subscription, approved by the State Property Committee of the Russian Federation, the value of the privatization objects could be paid in full or in part by privatization checks\textsuperscript{15}.

When buying a whole enterprise, as well as assets of liquidated enterprises at the auction, competitive or investment tender, buyer was obliged to make part of the payment in privatization checks within the limits of proceeds from privatization to be directed to the federal budget according to the rates established by the state privatization program.

The Russian Federal Property Fund or other institution, acting as a representative of the seller of the privatization object, was obliged to accept privatization checks at their face value as legal means of payment.

We should also note that, when issuing vouchers, there was no calculation stipulated to determine the share value of privatized enterprises relevant to the value of privatization check\textsuperscript{16}.

Privatization voucher did not certify its owner's right to the share in the public property. It was a kind of government securities, the yield of which was dependent on the method of its use by the owner. By purchasing shares for privatization vouchers, their owners could earn income through the sale of shares or in the form of dividends to be paid.

Privatization check gave the holder the right to buy shares of privatized enterprises in the whole territory of the Russian Federation, as well as shares of the check investment funds.

\textsuperscript{15} Directive of the State Property Committee of Russia of July 27, 1992 No. 308-r “On adoption of the Regulations on private placement of shares in the privatization process of the state-owned and municipal enterprises”; Directive of the State Property Committee of Russia of November 4, 1992 No. 701-r “On adoption and introduction of Regulations on the sale of shares in the process of privatization and Regulations on the special check auctions”.

In order to create necessary conditions for vouchers circulation, Decree of the President of the Russian Federation of October 7, 1992 No. 1186 “On Measures for organization of securities market during the process of privatization of the state-owned and municipal enterprises” provided for the establishment of the check investment funds - CIFs, which were to accumulate privatization checks for subsequent investments in shares of privatized enterprises. The CIFs accepted privatization checks (vouchers) from the population in exchange for shares of the funds. For vouchers they purchased shares of various privatized companies, and paid dividends their stockholders from the sum of dividends received on the shares of the invested enterprises.

Presidential Decree of February 12, 1993 No. 216 “On Measures to regulate the circulation and redemption of privatization checks” established that privatization checks could be bought and sold without restriction on the number. The price of privatization checks were determined by consensus between parties.

According to the State Program of privatization of the state-owned and municipal enterprises in the Russian Federation, approved by Decree of the President of December 24, 1993 No. 2284, small enterprises were to be sold at auctions and tenders. Privatization of large enterprises was carried out after reorganizing them into joint stock companies. In this case, the workers were entitled to preferential buyout of certain percentage of shares of privatized companies by private subscription.

Citizens of the Russian Federation, who were not the employees of enterprises to be privatized, had the opportunity to participate in privatization of enterprises through specialized voucher auctions and CIFs. The number of shares to be sold for one privatization voucher was determined on the specialized voucher auctions.

It should be mentioned that sale and purchase operations with privatization vouchers and acquiring securities in exchange for vouchers, including shares of the check investment funds and shares of privatized enterprises, were not subject to taxation. In addition, the cost of privatization voucher issued to the persons entitled
to receive them in accordance with the Russian legislation, was not included in the taxable gross income of citizens and was not subject to income tax on individuals. Personal income obtained in the form of the difference between the share value of the check investment funds at its initial placement and its value at subsequent sale at a higher price was also not subject to tax.

As already noted, the funds raised from privatization were distributed according to the standards set in the State Privatization Program.

The proceeds from privatization of federal property or the property of subjects of the Russian Federation, after payments made to members of labor collectives were to be distributed as follows: 45% of the funds were directed to the budget of constituent entity of the Russian Federation, 30% - to the federal budget, and 10% - to local budget. The remaining 15% of proceeds were allocated among the Federal Entrepreneurship Development Fund (5%), the State Property Committee (1.7%)\(^\text{17}\), the Russian Federal Property Fund (0.3%), the regional agency of the State Property Committee (4.5%) and the Regional Property Fund\(^\text{18}\) (3.5%).

In case of privatization of the municipal property, the norms of distribution were changed in favor of local budgets: 45% of the funds were directed to the local budget, 25% - to the budget of the subject of the Russian Federation, and 20% - to the federal budget. The remaining 10% were distributed among the State Property Committee (1.7%), the Russian Federal Property Fund (0.3%), the regional agency of the State Property Committee (4.5%) and the Regional Property Fund (3.5%).

Proceeds from the sale of property in the operative management of the Armed Forces of the Russian Federation, the Federal Counterintelligence Service of the Russian Federation, the Ministry of Internal Affairs of the Russian

---

\(^\text{17}\) At least 50% of funds from privatization received by the State Property Committee were directed to conducting of the voucher auctions. If as a result of the check auctions and check investment tenders, the lack of monetary component for the transfer to the privatization bodies according to the established standards, was detected, the missing funds were financed by the local budget. These funds were managed by a team, consisting of the representatives of the State Property Committee of Russia and the Russian Federal Property Fund.

\(^\text{18}\) The Fund of the state national, territorial national and administrative territorial formations.
Federation were in full (100%) transferred to the federal budget. 1% of the funds was used to stimulate activity of the organizers of the privatization process.

The “voucher” privatization is probably one of the most controversially and ambivalently assessed pages of the modern economic history of Russia. On the one hand, vouchers contributed to the denationalization of the economy, the creation of the private property institution, the formation of the corporate sector and the corporate securities market. As of July 1, 1994, the share of private sector in the consumer goods industry accounted for 48%, 47% in the food industry, 35% in construction, 42% in mechanical transport and vehicle repair, 55% in retail trade, 47% in public catering, and 55% in domestic services\(^19\).

On the other hand, vouchers were not able to ensure equitable and fair privatization of the state-owned property. Methods of the voucher privatization were inherently non-economic, and fierce debates on its “predatory essence” still continue to this day.

The initial mechanism of privatization had a combined nature. Privatization for all, being assumed to distribute privatization coupons (vouchers) among the entire population, was combined with the distribution of property among the company’s employees. The elements of non-paid privatization were closely interwoven with the basics of paid privatization. This mixed model of privatization has provoked the emergence of a number of serious economic problems (lack of required investments, valuation of property by the residual method, and so on)\(^20\) and has eventually led to the fact that a significant number of shares has never been sold.

After the failure of the voucher privatization, the government moved towards the new model, known as “monetary privatization”. The main reason for the transition to monetary privatization was the urgent need in budget revenues at the federal level and the need for investment for structural transformation of the Russian economy.

---

Decree of the President of the Russian Federation of July 22, 1994 No. 1535 “On the Main Provisions of the State Privatization Program of State-owned and Municipal Enterprises in the Russian Federation after July 1, 1994” became the starting point in the formation of new regulators of privatization. It established the following main goals of privatization after the expiration of privatization vouchers:

- Efficiency improvement of the Russian economy in general and the activity of individual companies;
- Formation of a broad stratum of private owners and support to the emergence of strategic private owners;
- Promotion of industrial investments, including foreign ones;
- Support to implementation of social protection and the protection of the private property owners’ (shareholders’) rights.

Three years after the beginning of monetary privatization, Federal Law of July 21, 1997 No. 123-FZ “On Privatization of the state-owned property and the Principles of municipal property privatization in the Russian Federation” was adopted. As conceived by the legislator, the emphasis in the new law is shifted towards privatization of the public property shares in joint stock companies.

Article 4 of the Federal Law No. 123-FZ provided for the adoption of the federal law on the state privatization program of state-owned property, which should establish priorities of the state-owned property privatization in the Russian Federation, privatization restrictions, the order of transfer of the state-owned property into the ownership of physical and legal persons, and the principles of the municipal property privatization.

The State Privatization Program was designed to respond quickly to changes in economic policy. For these purposes, it was provided that the Government of the Russian Federation, when submitting annual draft law on federal budget to the State Duma, should also submit the draft federal law on introducing amendments to the privatization program.

In practice, however, this federal law was not adopted, and privatization continued to be based on the renovated previously accepted programs – the State
Privatization Program of the state-owned and municipal enterprises in the Russian Federation, approved by Decree of the President of the Russian Federation of December 24, 1993 No. 2284, and the Main Provisions of the State Privatization Program of the state-owned and municipal enterprises in the Russian Federation after July 1, 1994, approved by Decree of the President of the Russian Federation of July 22, 1994 No. 1535.

The Federal Law No. 123-FZ provided that the funds gained from privatization should be distributed in accordance with the standards established by the privatization program, and respectively be transferred to the federal budget, the budgets of subjects of the Russian Federation and local budgets (Article 13 of the Federal Law No. 123-FZ). The legislator has fixed the binding nature of the payments and granted exemption from taxation.

In case of delay in transfer of funds from privatization, the tax authorities had the right to withdraw such funds from the accounts of the state property sellers on an uncontested basis. In this situation, the sellers of the public property had to also pay a fine for each day of delay at the rate of 1/300 the refinancing rate of the Bank of Russia on the date of the seller’s monetary liabilities to the budget.

As in the case of voucher privatization, monetary privatization faced the need for regulatory adjustments due to economic factors, the extent of which has not been addressed by lawmakers: enterprises, going through default of payments and enormous debt, including non-payments to the federal budget; the lack of demand for shares of the most privatized enterprises, and so on. It should be also taken into consideration that the course of privatization in that period was significantly influenced by political factors associated with the presidential elections of 1996.

And against such a challenging socio-economic and political background, the state demonstrated its intention to increase the budget revenues at any cost, selling out public assets.

21 The official date of completion of voucher privatization.
It is obvious that the practice of privatization was influenced with the aforementioned circumstances. As a result, the so-called non-standard forms of privatization emerged: mortgaging auctions, individual privatization projects, socially oriented commercial tenders\(^\text{22}\) and others.

Mortgaging auctions were among these non-standard forms of privatization used in practice at the end of 1995. The public shareholding of such major companies as “YUKOS”, “Norilskiy Nikel”, “Sibneft”, “Sidanko”, “Surgutneftegaz”, Novolipetsky Metallurgical Works, Novorossiysk Steamship Company and others passed into the ownership of the number of commercial banks through mortgaging auctions.

Regulation of the mortgaging auctions was based on the Decree of the President of the Russian Federation of August 31, 1995 No. 889 “On the Procedure of pledging the federal property shares in 1995”, Decree of the President of the Russian Federation of September 30, 1995 No. 986 “On the Procedure of decision-making on the management and disposal of the federal property shares”, Decree of the President of the Russian Federation of November 2, 1995 No. 1067 “About the Time-frame of sale of the federal property shares, passed to pledge in 1995”, and Decree of the President of the Russian Federation of December 7, 1995 No. 1230 “Issues of passing the federal property shares to pledge in 1995”.

In accordance with the scheme of holding the mortgaging auctions, the Government of the Russian Federation obtains loans from commercial banks against pledge of shareholdings. It was planned to hold auctions\(^\text{23}\) for the right to conclude loan agreements with the Russian Federation against pledge of the federal property shares. The Ministry of Finance of Russia has entered into loan agreements with the winners of such auctions. Upon the expiry of the set time, the Government had to repay loans, in the case of credit default the state-owned shareholdings were passed into the ownership of the creditors. The Government of the Russian Federation has not repaid the loans, and the public shareholdings have

\(^{23}\) Regulations for auctions were approved by the Decree of the President of the Russian Federation of August 31, 1995 No. 889 “On the Procedure of passing the federal property shares to pledge in 1995”.
been transferred to the ownership of the banks, the winners of the mortgaging auctions.

The income gained from pledging the federal property shares was distributed according to the standards approved by the Decree of the President of the Russian Federation of August 31, 1995 No. 889: 80% of total revenues were transferred to the federal budget, 15% - to the budgets of subjects of the Russian Federation, and 5% - to local budgets.

Individual privatization projects can be also referred to the nonstandard forms. They included “measures aimed at privatization of the federal property particularly important for the state, region or industry, and providing for the pre-sale preparation of the property with assistance of independent financial consultant”. The implementation procedure of such individual privatization projects was approved by the Resolution of the Government of the Russian Federation of April 1, 1997 No. 363.

Along with investments promotion, necessary for the production, technological and social development of privatized enterprises, and the improvement of the privatized property use, the fiscal task was one of the main objectives of implementing the individual privatization projects. They were to “maximize the federal budget income gained from privatization of the federal property through increasing the value of this property as a result of the financial consultant’s activity” (Section 1 of the Procedure approved by the Resolution of the Government the Russian Federation No. 363).

Financial consultants were engaged to assess the market value of the property to be privatized and to develop recommendations regarding restructuring of the property, as well as the time and method of its sale. The selection of financial consultants was carried out by tender considering the characteristics of the proposal, the cost of consultant’s services and professional capabilities (financial consultant should have an experience in public offering of securities, including in the international market, and have a staff involved previously in organization of privatization process).
The list of the federal property to be privatized through individual projects was approved by the Government of the Russian Federation upon proposal of the State Property Committee (“Karelsluda” Mining and Processing Plant, Taganrog Commercial Seaport, “Mosfilm”, JSC “Rosgosstrakh” and others).

Monetary privatization of the second half of the 1990s became one of the budgetary sources assumed to support the Government to compensate for the tax shortfall to the federal budget.

The financial effect of privatization of the second half of the 1990s can be evaluated by the following aggregated indicators.

6,000 enterprises were privatized in 1995. Income gained from privatization according to the federal budget, amounted to 4.991 trillion Rubles (in current prices), in fact they amounted 7.319 trillion Rubles. Over 70% of the actual income from privatization in 1995 was provided by mortgaging auctions.

5,000 enterprises were privatized in 1996; the budget indicators constituted 12.3 trillion Rubles, but, in fact, the budget received only 1.32 trillion Rubles.

In 1997, the budget law established 6.525 trillion Rubles revenues from privatization of 3,000 enterprises, and, actually, the revenues amounted to 18.1 trillion Rubles (significant financial results were obtained due to the sale of shares of the “Svyazinvest” holding company).

In 1998, the budget provided for to gain 8.125 billion Rubles from privatization transactions. In fact, privatization of 2,583 enterprises brought in 15.442 billion Rubles to the budget, of which 12.5 billion Rubles were received from the sale of the 2.5% of RAO “Gazprom” shares24.

It seems that the time has not come yet for final evaluation of the efficiency of privatization proceeds from holding mortgaging auctions. We will confine to a few evaluative statements on this issue.

Thus, the report of the Chamber of Accounts, published 2004, notes that “as a result of mortgaging auctions the alienation of the federal property has been

carried out at significantly underestimated prices, and the competition had actually feigned character”\(^{25}\). The report contains facts giving rise to a critical assessment of the results of practicing this nonstandard form of privatization. Only at the four of twelve auctions held at the end of 1995, the loan amount significantly exceeded the initial price. Actually, the banks “lent” the state its own money: the Ministry of Finance had to beforehand place financial means on the accounts of the consortium member-banks in the amount equal to the loan value, and then the money were to be transferred to the Government as a loan secured by the shares of the most attractive enterprises. Contrary to the rules of auctions, the banks did not transfer the loan funds to the account of the Bank of Russia; the funds were kept in the same commercial banks on special accounts, and so on.

In late 1995, basing on the results of audit, the Chamber of Accounts of the Russian Federation submitted the information letters to the Chairman of the Government of the Russian federation, heads of the Federation Council and the State Duma, Prosecutor General of the Russian Federation, Minister of Justice. The letters justified the conclusion about the ineffectiveness of mortgaging auctions and the requirement to abandon them.

Paul Klebnikov, commenting on the results of the mortgaging auction for YUKOS, wrote, referring to one of the “oligarchs”, “Buying the state-owned assets through a backroom deal and at such a low price, you run the risk that your rights for the new property will never be reliably protected. Citizens will consider you a fraud, and the state will see you rather custodian than the beneficial owner of assets”\(^{26}\).

There were several attempts to estimate the results of privatization in the 1990s undertaken by different government and political institutions and researchers, economists and lawyers. Almost all of them agreed that the mass

privatization in Russia was launched earlier than the necessary organizational and legal basis had been formed.

The underdevelopment of legal, regulatory, institutional prerequisites for carrying out such large-scale reforms of state-owned property, the lack of effective external control led to significant abuse, owing to which privatization in the public mind associates with shady financial transactions.

When trying to give an objective assessment of privatization campaigns of the 1990s, the divergent opinions clash and ultimately lead to ambiguous and contradictory results.

On the one hand, privatization helped radically change the structure of ownership in the Russian Federation. According to the estimates in the abovementioned report of the Chamber of Accounts, as of 2003, the share of private property in Russia amounted to 77%. The share of state-owned property comprised 4%, of municipal property – 6%, the rest 13% of property were in the combined ownership (state and private)\(^27\). The emergence of private property institution in Russia led to the development of market economic relations and modern market infrastructure.

On the other hand, the realities of privatization of the 1990s included privatization projects of “insider” nature, when the state-owned property was transferred to the management (industrial managers) of privatized enterprises on “special terms”. One of the outcomes of privatization of the 1990s in Russia, according to the World Bank, was the highest concentration\(^28\) of private property, objectively hampering the competitiveness of the Russian economy.

It should be also noted that privatization became the second heavy attack on the industrial relations after the collapse of the Soviet Union: the conversion of privatized enterprises in some cases led to the considerable negative consequences for the economy.

---

The attempt to summarize the results of privatization of the 1990s was undertaken in the Concept of the State Property Management and Privatization in the Russian Federation, approved by the Resolution of the Government of the Russian Federation of September 9, 1999 No 1024. It was stated in the Concept that “despite the fact that 58.9% of enterprises became private due to the mass privatization, some goals were not achieved:

- the stratum of effective private owners has not been formed;
- the economic restructuring did not lead to the desired improvement of the enterprises’ efficiency;
- the volume of investment promoted through privatization is clearly insufficient for industrial, technological and social development of enterprises;
- in some industries, the competitive position of enterprises on domestic and global markets has been failed to maintain”.

To eliminate the negative tendencies of privatization campaigns, it is necessary to develop new approaches addressing the issues related to the state property management, and to update the legislation on privatization.
